Your Data Path to Profits: NGS-IQ™ Business Intelligence System

NGS-IQ business intelligence system provides iSeries customers with a cost-effective solution that offers managers and analysts the multi-dimensional capabilities required for strategic planning; users a flexible and easy-to-learn data access environment; IS professionals power, centralized control and optimal field and record level security; and your company the pathway to increased ROI.

With seamless integration to your business applications, NGS-IQ can be your end-to-end business intelligence solution. The integrated modules of NGS-IQ address the ease-of-use and functional requirements of the full range of enterprise users by supporting secure DB2 access from Windows, Web-browser, and 5250 environments where desired. Customers using IBM WebSphere on the latest IBM iSeries server models may deploy NGS-IQ in a manner that eliminates interactive CPW usage. The scalability of NGS-IQ accommodates your future business intelligence needs as your requirements grow and change.

Advanced Function Query

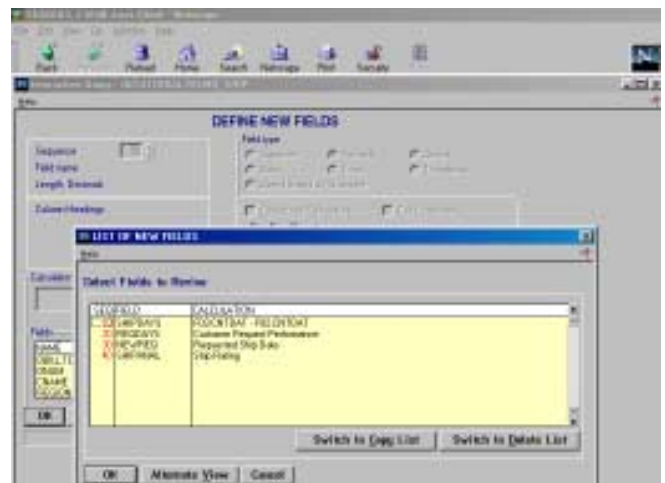

In comparison to IBM Query/400 and most query solutions, NGS-IQ produces reports in a single step, using only one query. NGS-IQ supports advanced features: conditionally defined calculations, summary-level new fields derived from report totals, rankings, running totals and more.

NGS-IQ features a Wizard to help users join files correctly and provides integrated report formatting, exits to

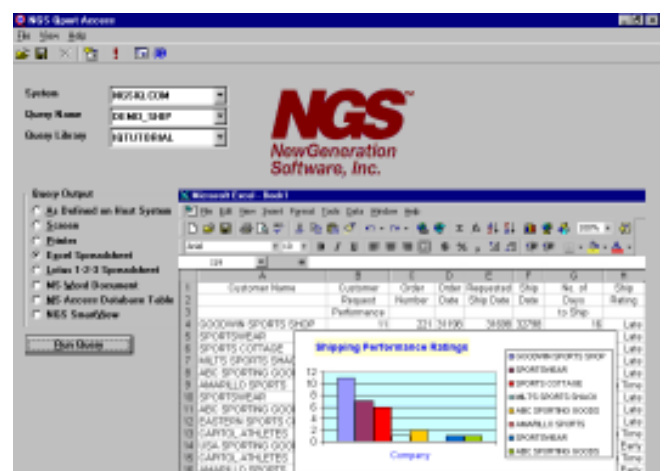

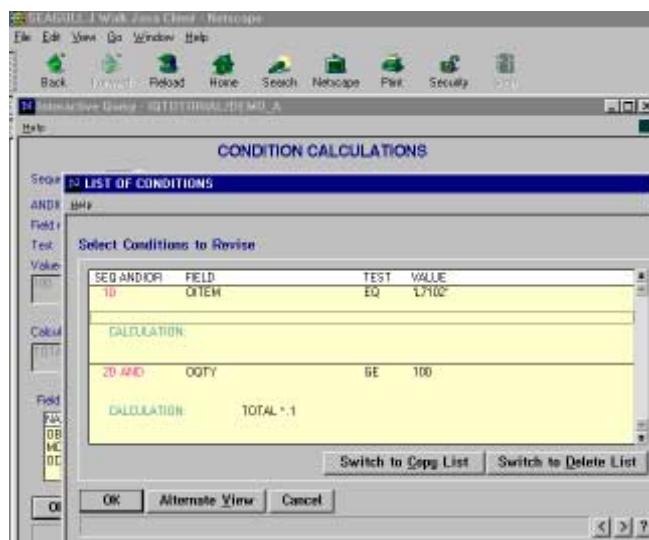

user programs and the optional assignment of user-defined file and field aliases to simplify database access.

Enterprise Reporting

NGS-IQ empowers your users by allowing them to select the records they need at run-time, thereby eliminating the need to revise numerous queries.

Your users can then download results to their favorite Windows applications, such as Excel or Lotus 1-2-3 spreadsheets, Access tables, Word documents or NGS-IQ's OLAP module. Authorized users can take advantage of NGS-IQ's support for TCP/IP to create, change, and run reports from remote locations as well as view report output.

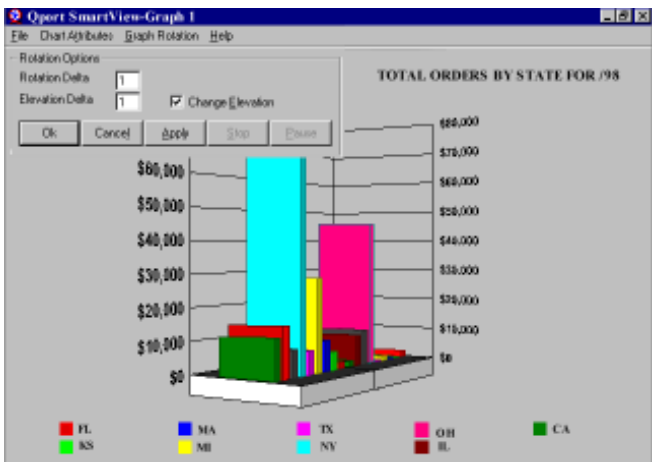

For non-iSeries data, authorized users can run simple queries defined in Microsoft Access and transfer the resulting data directly into a specified DB2 file.

Users can also output data as HTML text for viewing through popular Web browser applications. An upcoming release of the product will also allow users to output data to PDF, XML and email.

Multi-Dimensional OLAP Analysis

Qport SmartView™ dynamically transforms your data for multi-dimensional analysis with dynamic drill-down from summary to detail, user-defined critical-value highlighting, customized caption headings, slice-and-dice capabilities, pivot tables, and presentation-quality charts and graphs.

Data Warehouse/Data Mart Development

For building your data warehouse, NGS-IQ provides unlimited data extraction and consolidation, data cleansing, data transformation, data propagation, date arithmetic, and custom business information directories. The NGS-IQ data warehouse development system runs on the iSeries 400 and can be operated from graphical Windows and Web browser user interfaces.

Decision Assist is NGS' immediately deployable business intelligence starter kit for distributors and manufacturers. Decision Assist offers pre-built analytical reports and presentations for sales analysis, customer profitability, inventory management, and manufacturer item analysis.

Data Warehouse Consulting

NGS offers a full range of iSeries 400 data warehouse design, development and implementation consulting services. Our consultants and Business Intelligence specialists clarify your data analysis goals and identify your hardware and software requirements. We can assist you in designing and implementing customized data marts or a fully operational data warehouse using NGS-IQ.

About NGS

Sacramento, California-based NGS is an active IBM Business Partner as an advanced member of IBM's PartnerWorld for Developers Program.

NGS maintains a strong quality assurance program and releases frequent enhancements that emphasize product performance and reliability. NGS provides implementation consulting, user training, toll-free hotline support, comprehensive documentation, and on-line worldwide electronic customer support.

IBM has approved NGS-IQ as a business intelligence solution in IBM's Application Development Tools Network for iSeries 400.
